

AWS Terraform Final Task

Please create Terraform code for building the following environment

It includes:

- 2 Load Balancers - Internet Facing and Internal - **Create and use a Terraform module**
- 4 Web Servers - **Create and use a Terraform module**
- 4 Application Servers - **Create and use a Terraform module**
- 1 RDS with two nodes (MySQL)
- 1 S3 Bucket

Assume VPC and subnets already exist (No need to build a new network just use the default VPC)

Tip: Use Terraform Documentation and lessons code samples for guidance
